Initiating Close-out of Radioisotope Use Laboratories

To decommission a laboratory previously approved for radioisotope use, please complete the request to modify radioisotope authorization form and submit that form to the Radiation Safety section (Campus Mail Box 980112).

A member of the Radiation Safety staff will conduct a close-out survey of the laboratory which includes a complete swipe/geiger counter survey and removal of all postings, including caution signs and labels. Please insure that all radioactive material is removed from the laboratory before requesting a close-out survey.

Should you have any questions or need additional information about this service, please contact the Radiation Safety section at 828-9131.
